Credit Name: 2nd programing language

Assignment Name:

Eggs

**The following questions can help you in thinking critically about your problem-solving processes:**

**Understanding the Problem**

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

At first i was confused when the book said " 0 up to but not including 4 dozen." However then i reread it a few times and realized what it was asking and how to write the code.

**Planning the Solution**

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

I started on the parts I understood how to do,  like delcare the variables, seperating price groups by dozen and outputting the total without the extra eggs. Then I went back and attempted the things I didn't understand as well.

**Implementation**

Did you write the code in small pieces or attempt the entire solution at once?

How did you test your solution along the way to make sure it was working?

I wrote the peices I knew how, tested to make sure those worked then I added the rest and then went between testing and fixing.

**Overcoming Challenges**

What part of the problem was the most difficult for you?

How did you handle moments when you felt stuck or unsure of what to do next?

I got lost becuase there were more calculations then i was used to doing in the skill builders and in chapter 3. I struggled with calculating the extra eggs. I researched to find the formate for the calculation and using it.

**Learning**

Was there anything you learned that you think will help you with future challenges?

I learned how to add my method calculations with my extra calculation into a total.
