Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	**MetricConversion**	
INPUT	**PROCESS**	**OUTPUT**
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The user will input their choice of metric conversion by entering a number from 1 to 8. These numbers correspond to the metric conversions of, inches to centimeters, feet to centimeters, yards to meters, miles to kilometers, and vis versa	The program will take the number from 1 to 8 entered, then calculate the type of metric conversion the number corresponds to.	The program will display the conversion of the measurement the user entered then display the number the user entered. (the user entered 10 inches) Ex: 25.4 centimeters is equal to 10 inches
