Credit Name: Procedural Programming 1

Assignment Name: DigitsDisplay

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

I didnt find anything confusing because this mastery is simlar to something I helped Anaya with, so I knew roughly what I was doing

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

I knew how to separate a 2 digit number so I satrted with the ones and tens place calculation, then I moved on to the hundreds

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

How did you test your solution along the way to make sure it was working?

I tested to see if the code would display my first and second digits before testing the final code to see if it would display the third digit aswell, on 3 separate lines.

Overcoming Challenges

What part of the problem was the most difficult for you?

How did you handle moments when you felt stuck or unsure of what to do next?

At first i thought all the calculations would be divided by 100 then i started playing with dividing 10 and 100, I knew to separate the ones place I needed to divide by 100 but for the second and third I realized they needed to by divided by 10.

Learning

Was there anything you learned that you think will help you with future challenges?

I learned that to separate three numbers I need to start dividing by 10 after the first digit.
