Credit Name: Procedural Programming 1

Assignment Name: DigitsSum

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

nothing was confusing about this mastery because most of the code was reused from my other codes or simple calculations.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding?

How did you decide on the tools, data structures, or algorithms to use?

I re-used the code from my other masteries and then did the calculations and displays after.

Implementation

Did you write the code in small pieces or attempt the entire solution at once?

How did you test your solution along the way to make sure it was working?

I tested it at the very end because I was confident in this specific mastery

Overcoming Challenges

What part of the problem was the most difficult for you?

How did you handle moments when you felt stuck or unsure of what to do next?

I didn't have any difficulties with this mastery, the only part I was a bit unsure was the calculation of the sum which ended up working first attempt.

Learning

Was there anything you learned that you think will help you with future challenges?

I learned that codes from other projects / skillbuilders are very useful to re-use.
