Credit Name: 2nd programming language

Assignment Name:Eggs

Error Log Entry

What error message did you encounter (if any)?

I did have an Error message because of a leak in the code i didnt notice

What unexpected behavior did your program exhibit?

When i fisrt calculated the extra eggs it came out as a very long incorrect decimal

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

it was a logic error, I put in the wrong numbers for the calculation, instead of '10' I put '100'

Include a screenshot of specific lines of code.

```
//calculate the integer in the ones place for the inputed 3 digit number
int ones = num / 100;

//calculate the integer in the tens place for the inputed 3 digit number

int tens = (num / 100) %10;

//calculate the integer in the hundreds place for the inputed 3 digit number
int hundreds = num % 100;
```

How did you fix the issue?

I changed the calculations to be (num/10) and num%10

Provide the corrected code or solution using a screenshot.

```
//calculate the integer in the ones place for the inputed 3 digit number
int ones = num / 100;

//calculate the integer in the tens place for the inputed 3 digit number

int tens = (num / 10) %10;

//calculate the integer in the hundreds place for the inputed 3 digit number
```

```
int hundreds = num % 10;
```
